

#FABCONSQLCON2026

FABCON
Microsoft Fabric
COMMUNITY CONFERENCE

SQLCON
Microsoft SQL
COMMUNITY CONFERENCE

ATLANTA MARCH 16 - 20, 2026

Enterprise-Grade Migration to Microsoft Fabric

Modernizing Lakehouses, Pipelines, Analytics & AI

Presenters: YASH Technologies | Vita Coco

Session Duration: 60 Minutes | Fabric Community Conference 2026

Microsoft Fabric

YASH Technologies × Vita Coco

Session Agenda

Welcome & Speaker Introductions

Vita Coco + Microsoft + YASH Technologies session overview

Modernization Is a Platform Decision

Vita Coco's Platform Evaluation Journey

Fabric Architecture Deep Dive

Vita Coco Modernization Story

AI & Future Roadmap

Q&A

About YASH:

As a Microsoft Fabric Featured Partner and Analytics on Microsoft Azure Specialization holder, YASH Technologies delivers proven outcomes with 30+ Fabric implementations and 100+ cloud data platforms deployed. Our accelerators and AI-powered Data Agents drive up to 90% governance automation, 70% growth in self-service analytics, and 60% improvements in data integration accuracy—helping enterprises become truly AI-ready, faster.

What We're Showcasing @ Booth 637

- **Data Readiness Assessment for AI**
Rapid evaluation to identify gaps and define actionable steps to become AI-ready.
- **AI-Powered Data Agents**
Automated ingestion, data quality checks, alerts, and workflows inside Microsoft Fabric.
- **Governance Accelerator for Fabric + Purview**
Automated glossary creation, sensitivity labeling, and metadata ingestion for systems like QAD and Oracle Fusion.
- **Fabric Lakehouse Architecture Review (Complimentary)**
Expert guidance on scalability, cost optimization, governance, and AI enablement.

Principal Architect
Microsoft

Enterprise Modernization

≠ ETL rewrite

It's a complete rethink of how your organisation collects, governs, understands, and acts on data.

Enterprise Data Platform: Spectrum of actions

01 Data Ingestion & Integration

Not just ETL batch jobs

- Real-time CDC & streaming pipelines
- SQL Mirroring / no-move replication
- Multi-source: SAP, CRM, files, APIs

02 Architecture & Storage

Not just a bigger data warehouse

- Medallion: Bronze → Silver → Gold
- Lakehouse + OneLake as single source of truth
- Compute/storage separation & versioning

03 Reporting & BI Modernization

Not just new dashboards

- Self-service Power BI + TM1/Cognos coexistence
- Direct Lake — no import, zero latency
- Governed semantic models for business users

04 Data Governance & Trust

Not a bolt-on compliance layer

- End-to-end lineage: source system to report
- Unified catalog via Microsoft Purview
- Row-level security & audit trails built-in

05 AI & Analytics Readiness

Not a future phase — built in from day one

- Governed Gold layer = Copilot-ready
- Fabric AI Skills, ML notebooks & forecasting
- Natural language querying in Power BI

06 Operational Resilience & DevOps

Not fragile, manual pipelines

- Self-healing pipelines with auto-retry logic
- Azure DevOps CI/CD & full Git versioning
- Centralised monitoring, SLA alerting & lineage

Understand before you build

Assess the landscape → Decide how to move → Validate before you commit

01

ASSESS

Know What You Have

- Map lineage & dependencies from source systems
- Build the Business impact heatmap — which workloads drive decisions vs. are orphaned
- Pain points quantified: runtime, failure rates, manual hours, latency
- Complexity score : data volume, transformation logic, criticality
- AI Readiness audit

02

DEFINE STRATEGY

Decide How to Move

- Apply the framework
- Define strategy from usage patterns & complexity
- Platform selection driven by need, data and pain points, not preference
- Prioritised migration wave plan generated with effort estimates
- TCO modelling + cost simulation

03

BUILD AN MVP

Prove It Before You Scale

- Pick the highest-value workload — prove a difficult case first
- Validate connectivity, Integration, gateway latency benchmarks
- Migrate one full pipeline end-to-end: Bronze → Silver → Gold + Reporting Layer
- Data reconciliation between old and new system
- Go / No-Go gate before full programme investment

Intelligent Execution Phases

01

Sense & Understand

- AI auto-maps data lineage & dependencies
- Business impact heatmap from usage patterns
- Pain points quantified with benchmarks
- Complexity score per workload

02

Design & Architect

- Medallion architecture shaped from source schema
- CDC strategy by AI change-frequency analysis
- Security & governance blueprint generated
- IaC templates for Fabric workspaces

03

Build & Accelerate

- SSIS → Fabric notebook auto-translation
- SQL → PySpark conversion by Copilot
- CDC pipelines scaffolded from data frequency
- Self-documenting pipelines with AI lineage

04

Validate & Certify

- Test cases auto-generated from business rules
- Row & aggregate data reconciliation
- Anomaly detection before cutover
- Predictive cutover risk scoring

05

Deploy & Evolve

- Self-healing pipelines auto-retry on failure
- Copilot natural language analytics day one
- Continuous drift & quality monitoring
- AI-suggested optimisations from usage

Vita Coco: the Customer Perspective

The Vita Coco Company

As a Public Benefit Corporation and a Certified B Corp, Vita Coco strives to deliver high-quality hydration to our consumers, while giving back to the coconut farming communities where our product grows.

The Vita Coco Company

MARKET POSITION

#1

US Coconut Water
Category Leader

>40% US market share

#1

UK Coconut Water
Category Leader

>70% UK market share

\$609M

Revenue (TTM)

+23% year-over-year

\$1.7B

Market Cap

NASDAQ: COCO

GLOBAL FOOTPRINT

Americas

Largest market · 80%+ of revenue · US & Canada

United Kingdom

Category leader · 70%+ market share · operational hub

Europe & Asia

France · Spain · Nordics · China · Singapore · Middle East

Competing in the ~\$2B global coconut & plant waters category · Euromonitor

Founded 2004 · NYC · HQ: New York City · Offices: London & Singapore

Vita Coco data: NASDAQ filings · Euromonitor · IRI Custom Research · Session context: YASH Technologies · Fabric Community Conference 2026

The Data Modernization Imperative

Legacy Architecture

Sources
SAP ECC hosted on **AWS EC2**, Retailer & Distributor Sales, Transportation data & more

Tech Stack
SQL Server, SSIS, TM1, Power BI

Pain Points

Performance Bottlenecks
Full-scan SSIS pipelines taking 3+ hours daily, blocking timely business decisions

No Incremental Logic
Absence of reliable timestamps in SAP ECC forces complete table re-extractions

Rigid SSIS Packages
Tightly coupled on-premise ETL with no cloud scalability or parallel orchestration

Limited Self-Service Analytics
Heavy Excel + static Cognos reports; no modern dashboarding or ad-hoc exploration

On-Prem SQL DW Constraints
No elasticity, high maintenance burden, no separation of compute and storage

Historical Data Overhead
10 years of data (~2015+) scanned every run with no efficient partitioning strategy

Vita Coco's Platform Evaluation Journey

We evaluated three modern data platforms before choosing Microsoft Fabric

AWS Option

- › Glue ETL + Redshift + S3
- › Already on AWS EC2 (SAP ECC)
- › Familiar infrastructure team
- › High operational overhead
- › Limited native BI integration
- › TM1/Cognos connectivity

EVALUATED

*Powerful — But Multi-Service Heavy
High ops overhead, weak native BI ecosystem*

Databricks

- › Delta Lake + Unity Catalog
- › Best-in-class Spark processing
- › Strong CDC & streaming support
- › Premium licensing cost
- › No native Power BI embedding
- › Separate BI tooling required

EVALUATED

*Strong Lakehouse Model with ML Depth
Cost & BI integration complexity*

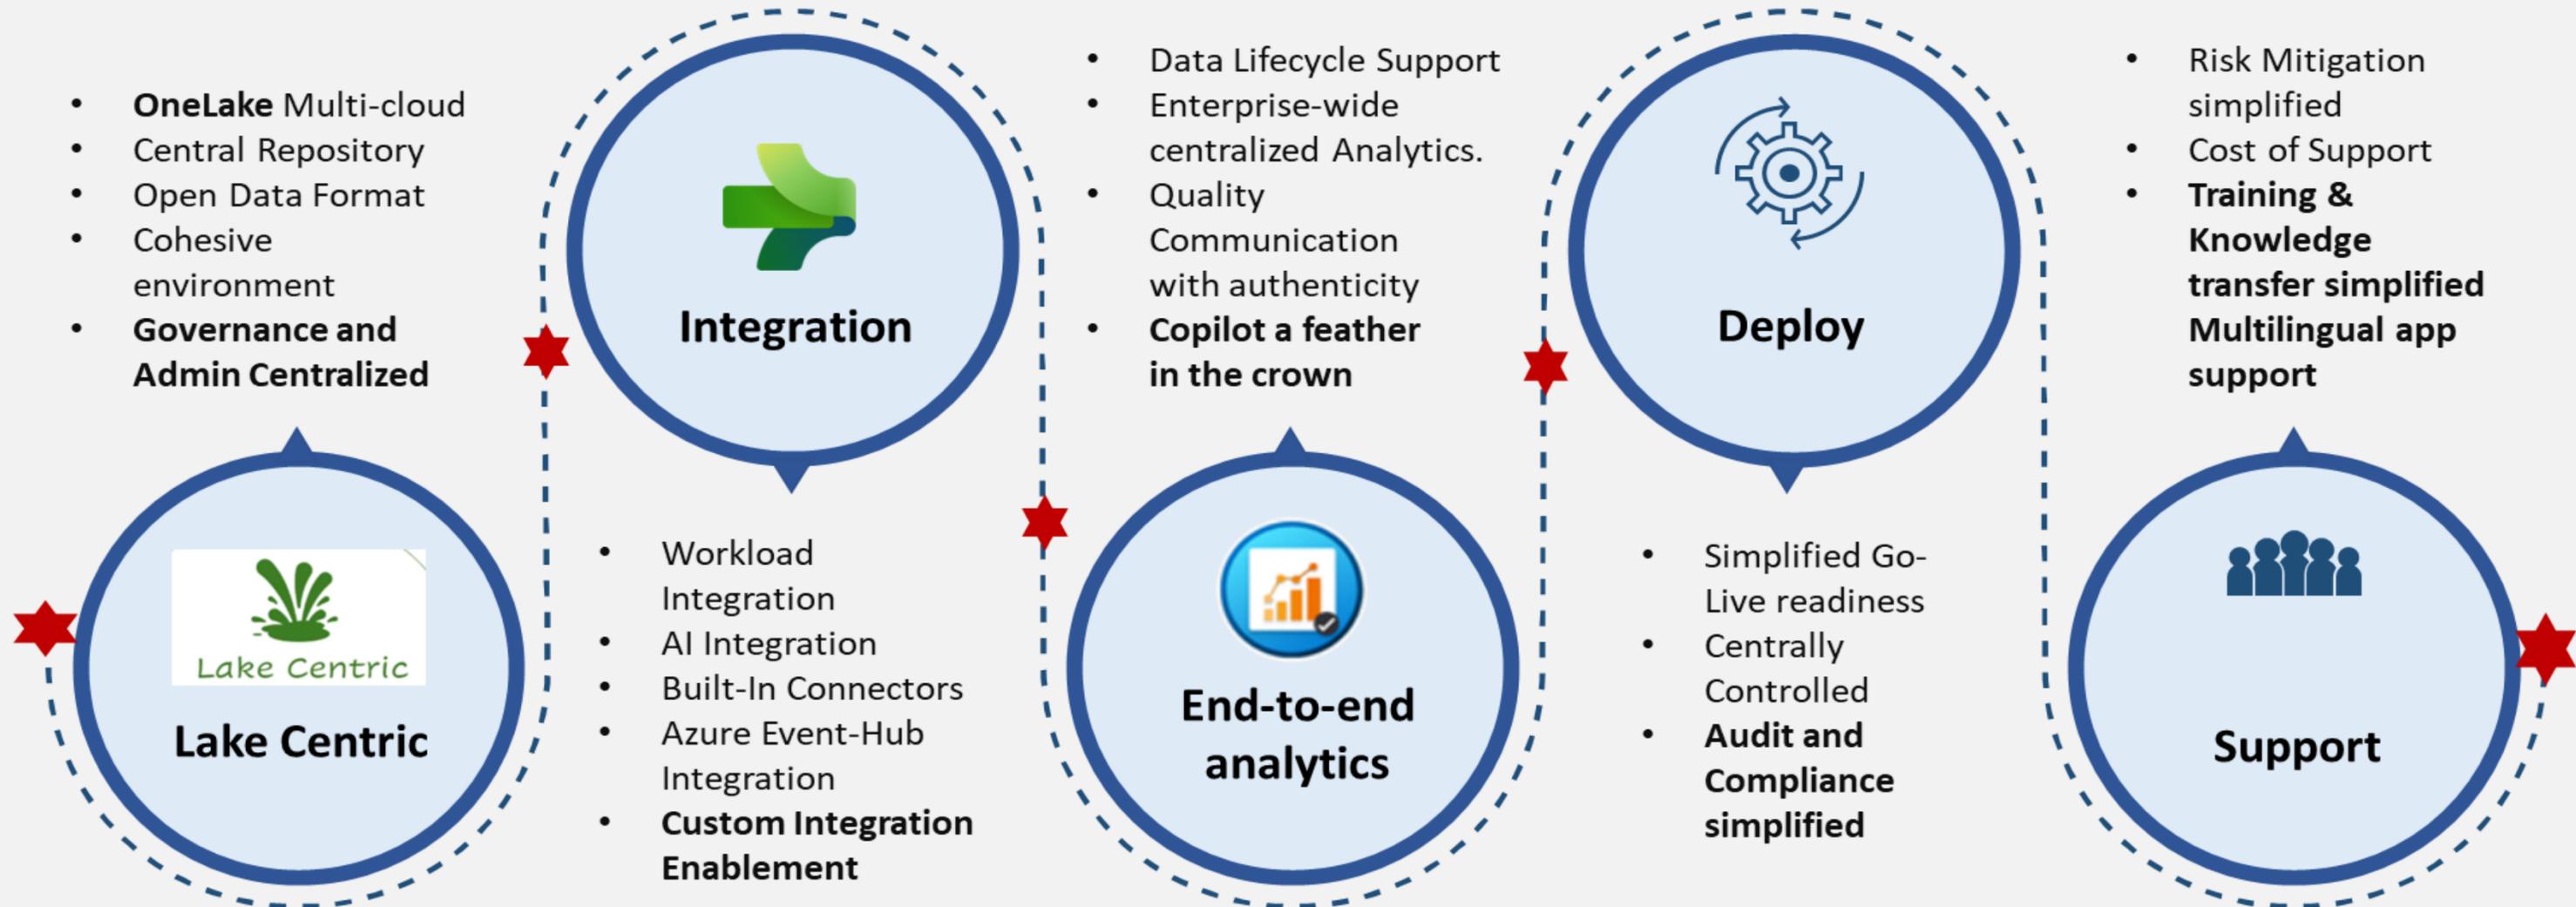

Microsoft Fabric ✓ SELECTED

- › All-in-one SaaS analytics platform
- › Native Power BI + TM1 support
- › Fabric Pipelines replace SSIS
- › SQL Mirroring for SAP ECC
- › Unified governance & monitoring
- › Medallion architecture built-in

SELECTED

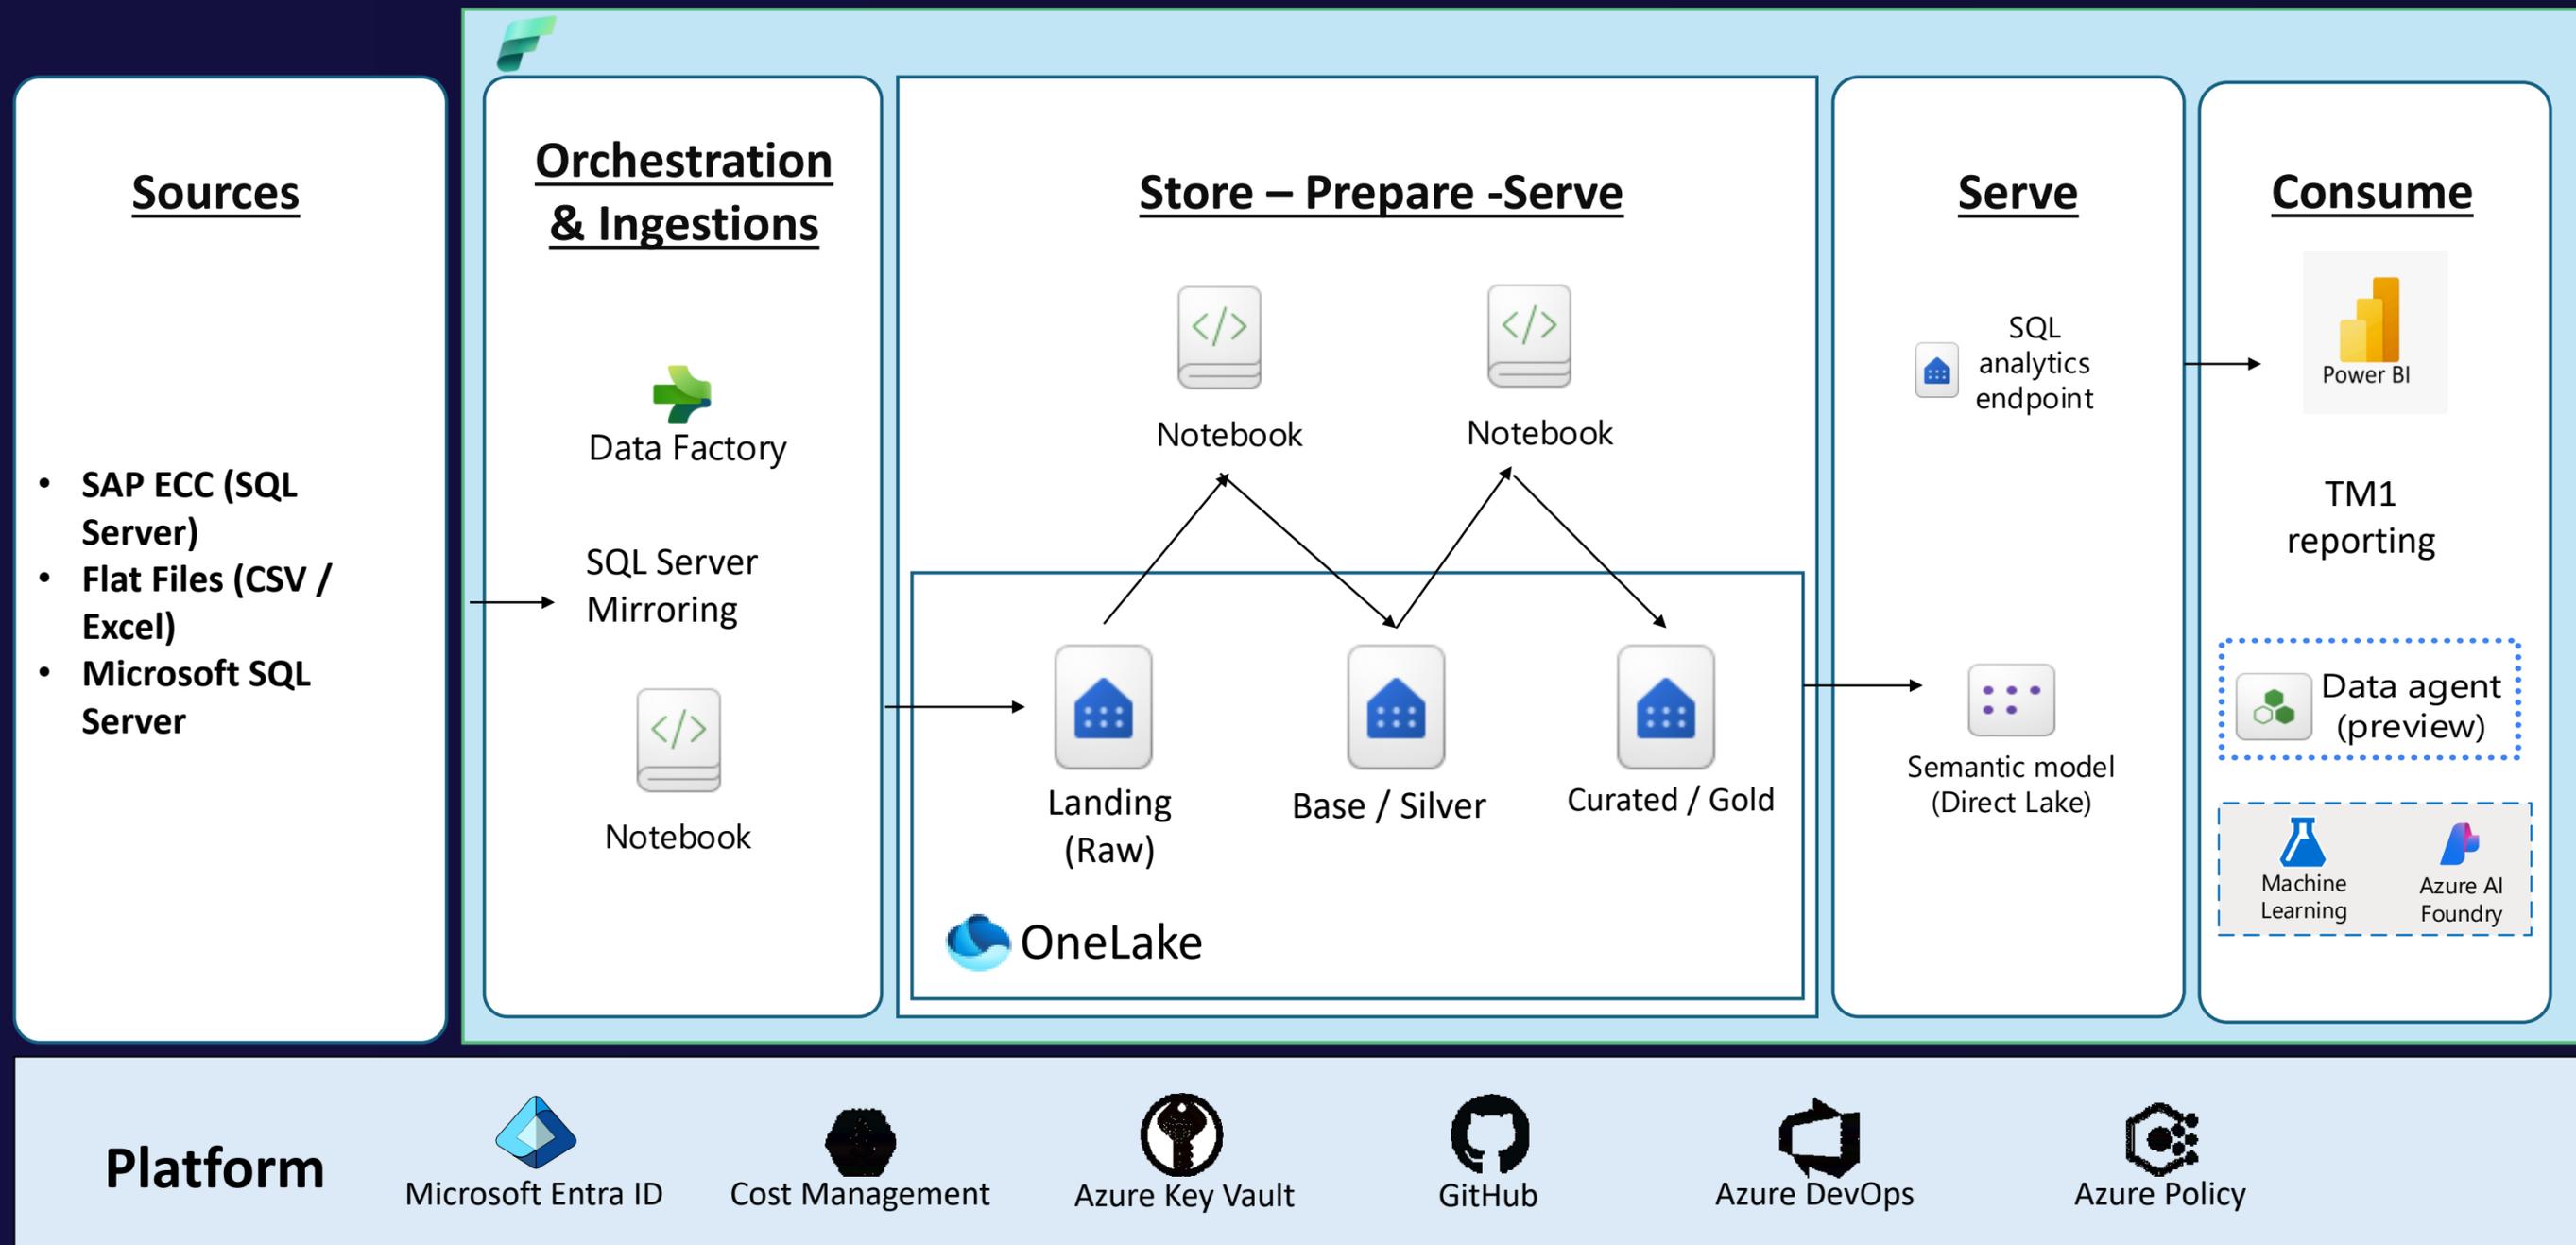

*Unified Data Operating Model
Best TCO, unified platform, existing M365 licensing*

Microsoft Fabric – A Unified Analytics Platform

 *Microsoft Fabric aims to democratize data analytics by providing a unified and accessible platform that empowers organizations to unlock the full potential of their data. It does this by converging data engineering, data science, and business intelligence into one cohesive system, centered around a unified data lake.*

Fabric Architecture - Implemented

Outcomes – Before vs. After

BEFORE – Legacy SSIS Stack

ETL Runtime	~3 hours (full scan)
Refresh Frequency	Once daily, manual trigger
Incremental Load	None – full table scan every run
Data Architecture	Flat SQL DW, no raw/refined split
Reporting Options	Excel & Cognos static reports only
Monitoring	No centralized lineage or alerting
Scalability	On-prem SQL DW – fixed compute
Deployment	Manual SSIS changes, no CI/CD

AFTER – Microsoft Fabric

< 30 min (incremental CDC)
3x per day, automated + on-demand
CDC + delta tracking via SQL Mirroring
Medallion: Bronze → Silver → Gold
TM1 + Cognos + Power BI self-service
Fabric monitoring + Azure Log Analytics
Serverless Fabric Lakehouse + SQL DB
Azure DevOps CI/CD with Git integration

Key Challenges & How Fabric Solved Them

Challenge: Long ETL Runtime (~3 hrs)

Solution: Incremental CDC pipelines; runs every 2 hrs with faster execution

Challenge: No Incremental Logic (Full Table Scans)

Solution: CDC / last-modified logic via SQL Mirroring or delta tracking

Challenge: Rigid SSIS with Manual Triggers

Solution: Fabric Pipelines with flexible scheduling + event-trigger execution

Challenge: Manual Cleansing/Joining in SSIS

Solution: Modular PySpark + SQL notebooks — reusable, version-controlled logic

Challenge: No Raw/Refined Segmentation

Solution: Structured Medallion Architecture: Bronze → Silver → Gold

Challenge: On-Prem SQL DW Limitations

Solution: Scalable Fabric SQL DB + Lakehouse with serverless compute

Challenge: Limited Reporting (Excel & Cognos only)

Solution: Power BI introduced for modern analytics + TM1/Cognos continuity

Challenge: No Centralized Monitoring or Lineage

Solution: Full pipeline visibility via Fabric + Azure monitoring stack

Road Ahead..

An intelligent sales day · Agentic AI in action

AI Road Ahead · FY26

Market Manager

ATLANTA · 80 stores

manages 80 retail stores. Every morning, his AI agent plans the optimal day — before he finishes his coffee.

8:00 AM

AI Triage Agent runs

- Scans all 80 stores, flags voids & promos
- Scores stores: Value · Urgency · AI

8:15 AM

Route built & brief sent

- Top 7 stores selected & drive route built
- SMS + email brief sent

8:30 AM

MM reads the plan

- 7 stores, times & void/promo flags shown
- One tap to open route in maps

11:15 AM

Store visit: Target

- Promo display checked & restocked
- Store checked off, next auto-queued

10:00 AM

Store visit: Walmart

- Void confirmed, speaks to store manager
- Order placed & logged back to Fabric

Feedback Loop

- Rep checks off each store visited
- Outcomes logged back to Fabric
- Model learns · every rep · every day

Zero missed voids

Routes 40% more efficient

Model improves every day

BUILT ON:

Microsoft Fabric
OneLake · Gold layer

Retailer Scan Data
Units · SKU · Store · Daily

Promo Calendar
Every store's promo week

Inventory Signals
Distributor + warehouse

Azure AI Foundry
ML · Route AI · Agent

Store Master
Territory · Address · Map

Key Takeaways

What this session proves — and what to take back to your organisation

01 Your data foundation IS the AI strategy — not a prerequisite to it

02 Migration / Modernization is not an ETL rewrite — it's six simultaneous changes

03 Architecture is foundational — Look on workload & Score them with the Triage Model

04 The Intelligence is real, possible, and buildable now

05 The POC gate is your most important governance decision
